Dear Fellow Educator:

I would like to make you aware of a few powerful, effective curriculum programs that were instrumental in our district achieving third place for most improved among all BIA schools. Our students continue to make impressive progress in reading and math scores, thanks to the programs from Voyager.

The *Voyager Universal Literacy System*<sup>®</sup> is a comprehensive core reading program for our kindergarten through second grade. Our students who came to kindergarten without adequate written or oral language skills quickly acquired a strong foundation through the program's explicit, systematic instruction. Students in the other grades dramatically improved their reading skills because they were constantly engaged in the program's adventures that took them all over the world.

We also decided to implement *Vmath*<sup>®</sup> as a summer program with our struggling math students. In just four weeks, students made amazing progress on essential math concepts and skills. After seeing the results, we purchased the program to provide math instruction during this school year, too.

Our school district just added *Passport Reading Journeys*<sup>™</sup> also for our at-risk middle and high school students. I hear the teachers are very excited to get started and think their students will respond well to the program's current topics, interactive videos and the special online technology component (I hear we might be getting one in the primary grades too!).

We know that our students will continue to make significant gains in reading and math with the Voyager programs. I hope that this letter will prompt you to look at these programs and realize the impact they can have on your students too.

If you would like to talk to me about how we use the Voyager programs and all the support they provide, please do not hesitate to contact me at (928) 697-2420. I am eager to share our story of continuing success.

Sincerely,

Jacqueline Benally Principal Kayenta Primary School
